

My Rika Pellet Stove

I have a 1700+ square foot manufactured home. about 20 years old heated by propane. I had heard about "Pellet Stoves", so I began doing a little research on them.

One of the first thing I found out about them was that no one who sold them in Pahrump had any idea who could install the stove they sold, or could maintain the unit .

I finally did some on line research about pellet stoves and read a lot of the reviews consumers posted about their pellet stoves, the good and a lot of the bad. Needless to say, I was about to give up.

While looking for an item in the telephone book, I came across TJ Pellet Stoves and decided to check it out.

I was invited over to see the "RIKA Integra II" Pellet stove in action, capable of heating a 2500 square foot resident. Joe provided all the specifications and availability to my satisfaction

I immediately decided to have one installed at my home which was done very professionally by Joe, who also took the time to explain the controls, cleaning, and overall workings of the unit.

This is my second season with my"RIKA", my wife is warm, my house is warm, I am saving money by not utilizing all that propane, " I am happy."
